

(a) Loss level — a suggestion

at inference the loss is gone:
the rollout path carries no physics

(b) Post-hoc — a patch

correction sits outside the learned map:
a patch that fights drift it cannot remove

(c) Inference path (ours) — a law

constraints sit on the forward pass:
every step re-enters $\mathcal{C}$ — no bypass

-- bypassable — physics off the inference path — enforced — physics on the inference path
